Joomla Mobile Performance: **The Responsive Mythes**

Is Joomla! mobile ready?

J1.0?

J1.5?

J2.5?

J3.0?

Joomla 1.0 - No

Joomla 1.5 - Yes/No

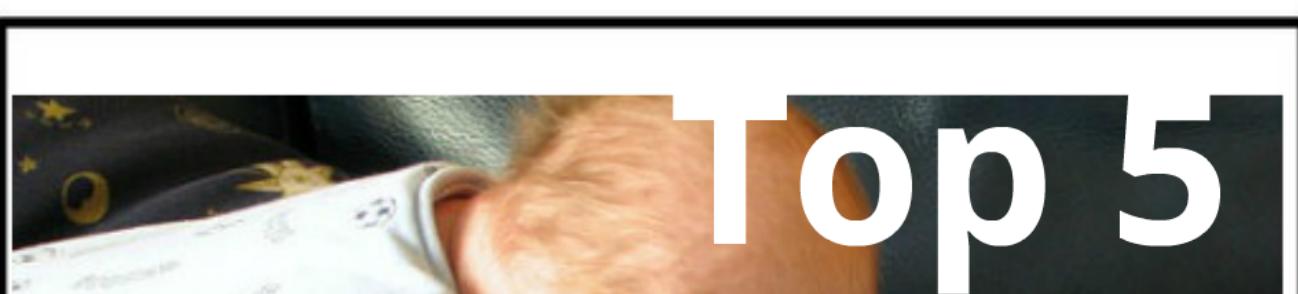

Joomla 2.5 - Yes/No

Joomla 3.0 - Yes, they say so, but is it true?

What is
Mobile Performance?

and is it
possible with
Joomla!

- minim
defi -

Top 5

basic performance

- minimize http request
 - deflate content
 - merge css/js
 - expire data
 - images

Network latency

Network latency

How do we optimize image using Data URI's?

```
1 /* Data URI images */
2 #top{background-image:url
(data:image/
gif;base64,R0lGODlhAQACAAIAAP///
01NTSH5BAAAAAAALAAAAAABAAIAAAICDA
oA0w==)}
3 #nav-home a,#nav-services a,#nav-
about a,#nav-contact a
{background-image:url(data:image/
png;base64,iVBORw0KGgoAAAANSUhEUg
AAAIIYAAAALCAYAAAAD1n1MVAACYDFEWHD
```

```
1 /* Data URI images */
2 #top{background-image:url
3 (data:image/
4 gif;base64,R0lGODlhAQACAAIAAP///
5 01NTSH5BAAAAAAAALAAAAAAABAAIAAAICDA
6 oA0w==)}
7 #nav-home a,#nav-services a,#nav-
8 about a,#nav-contact a
9 {background-image:url(data:image/
10 png;base64,iVBORw0KGgoAAAANSUhEUg
11 AAAIIVYAAAALCAYAAAAD1n7M/AAAACYRFWHD
```

What about @font-face

```
@font-face{  
    font-family: Fertigo;  
}
```

```
src: url("Fertigo_PRO.otf") format("opentype"); }
```

```
h1 { font-family: Fertigo; color: #204A87;  
text-shadow: #AAA 2px 2px 0px}
```

- not every mobile device supports this
- Using an extra request to eg. google-fonts: this does not speed up

What is a manifest file, and do I need this?

```
1 CACHE MANIFEST  
2 #version 1  
3  
4 CACHE:
```

Can we va

- not always a good idea
- know your browser
- penalty on every subsequent page rendering

Can we validate/test our mobile website?

- google pagespeed insight - mobile
- ready.mobi
- mobileperf - firebug mobile
- validator.w3.org/mobile/
- weinre

Mythes

- store images in base64 offline storage for usage as inline images later
- Client Storage (localStorage and sessionStorage)
- Safari on iOS accepts up to 5 MB in offline storage

- validator.w3.org/m
- weinre

what's the **story** on these

Responsive Mythes

Responsive is a **very nice trick** to auto detect the browser size and scale. Does it **satisfy** on all the performance needs I showed before?

Consider a couple of things before you just pick a responsive theme.

It's **not** the one and only solution for the best optimized mobile website!

2014

Network latency

Mobile devices have little batteries. They turn off their radios to conserve power.

Network	Generation	Expected Latency
LTE	4G	40 - 50ms
HSPA+	3.75G	100 - 200ms
HSPA	3.5G	150 - 200ms
EDGE	2.75G	600 - 750ms
GPRS	2.5G	600 - 750ms

RESS: Responsive Design + Server Side Components

No black-box

Responsive Images

responsive-images technique that assigns a particular background image to a div according to media-queries

```
<style>
@media (max-width:390px) {
  #image-container {
    max-width: 109px;
```

Mobile devices have little batteries. They turn off their radios to conserve power.

Responsive Images

responsive-images technique that assigns a particular background image to a div according to media-query matches

```
<style>
@media (max-width:390px) {
  #image-container {
    max-width: 109px;
  }
  .image {
    background-image: url(image1.jpg);
  }
}
@media (max-width:390px) and (-webkit-min-device-pixel-ratio:1.5) {
  .image {
    background-image: url(image2.jpg);
  }
}
@media (max-width:390px) and (-webkit-min-device-pixel-ratio:2) {
  .image {
    background-image: url(image3.jpg);
  }
}
@media (min-width:391px) and (max-width:500px) {
  #image-container {
    max-width: 121px;
  }
  .image {
    background-image: url(image4.jpg);
  }
}
```

A different data-fullsrc responsive-images technique is used on the Boston Globe's responsive website. It's a combination of markup, JavaScript and a server-side redirect rule:

```

```

Microsoft's responsive website uses Scott Jehl's Picturefill technique:

```
<div data-picture data-alt="Alternate text here">
<div data-src="image1.png"></div>
<div data-src="image2.png" data-media="(min-device-pixel-ratio: 2.0)"></div>
<div data-src="image3.png" data-media="(max-width: 539px)"></div>
<div data-src="image4.png" data-media="(max-width: 539px) and (min-device-pixel-ratio: 2.0)"></div>

<noscript></noscript>
</div>
```

<https://github.com/scottjehl/picturefill>

Is Joomla! mobile ready?

Joomla 1.0 - No
Joomla 1.5 - Yes/No
Joomla 2.5 - Yes/No
Joomla 3.0 - Yes, they say so, but is it true?
Joomla 3.4 - Yes, is it still true?

Joomla 3.0

The following information below is from the [Joomla! 3 Introduction site](#).

Mobile Ready

Joomla! takes a big leap into the mobile space with a total overhaul of both its frontend design and administrator interface. With the adoption of the Bootstrap framework, Joomla! has become the first major CMS to be mobile ready in both the visitors and administrator areas. Now every website can have mobile friendly content for visitors and mobile friendly tools for administrators.

- Fully Responsive Site Template
- Fully Responsive Admin UI
- Fully Responsive Core Output

respimage is a responsive images polyfill,
that loads your images fast and responsibly
<https://github.com/aFarkas/respimage>

To support IE9 all source elements have to be
wrapped inside of an **audio** or **hidden video** element

```
@font-face {  
    font-family: 'Nobile';  
    font-style: normal;  
    font-weight: 400;  
    src: local('Nobile'), local('Nobile-Regular'), url(http://fonts.gstatic.com/s/nobile/v5c0A.woff) format('woff');  
}
```

@fonts-face

Joomla 1.0 - No

Joomla 1.5 - Yes/No

Joomla 2.5 - Yes/No

Joomla 3.0 - Yes, they say so, but is it true?

Joomla 3.4 - Yes, is it still true?

2015

<picture>

What is the ‘picture’ Element?

The **picture** element is a markup pattern that allows developers to declare multiple sources for an image. By using media queries, it gives developers control as to when and if those images are presented to the user.

```
<picture>
  <source media="(min-width: 40em)"
    srcset="big.jpg 1x, big-hd.jpg 2x">
  <source
    srcset="small.jpg 1x, small-hd.jpg 2x">
  
</picture>
```

What are the 'srcset' and 'sizes' attributes?

```

```

HTTPS

HTTPS as a ranking signal

Posted: Wednesday, August 06, 2014 8+1 4,992 Tweet 2,190 Vind ik leuk

Webmaster level: all

Security is a top priority for Google. We invest a lot in making sure that our services use industry-leading security, like strong [HTTPS encryption by default](#). That means that people using Search, Gmail and Google Drive, for example, automatically have a secure connection to Google.

Beyond our own stuff, we're also working to make the Internet safer more broadly. A big part of that is making sure that websites people access from Google are secure. For instance, we have created resources to help webmasters [prevent and fix security breaches](#) on their sites.

We want to go even further. At Google I/O a few months ago, we called for "[HTTPS everywhere](#)" on the web.

We've also seen more and more webmasters adopting [HTTPS](#) (also known as HTTP over TLS, or Transport Layer Security), on their website, which is encouraging.

For these reasons, over the past few months we've been running tests taking into account whether sites use secure, encrypted connections as a signal in our search ranking algorithms. We've seen positive results, so we're starting to use HTTPS as a ranking signal. For now it's only a very lightweight signal — affecting fewer than 1% of global queries, and carrying less weight than other signals such as [high-quality content](#) — while we give webmasters time to switch to HTTPS. But over time, we may decide to strengthen it, because we'd like to encourage all website owners to switch from HTTP to HTTPS to keep everyone safe on the web.

Feedback

Reported to be supported in some modified versions of the Android 4.0 browser.

WOFF 2.0 - Web Open Font Format - WD

Global

43.45%

TrueType/OpenType font that provides better compression than WOFF 1.0.

Notes Known issues (0) Resources (5) Feedback

Current IE status: Under Consideration

¹ Default 'enabled' for Firefox Developer Edition and Nightly, but Beta and Release versions will need to set a flag to 'true' to use WOFF2.

Google's statement for 2015

Finding more mobile-friendly search results

Posted: Thursday, February 25, 2015 | 8:1 | 3,636 | Tweet: 3,090 | +1

Webmaster level: 4

When it comes to search on mobile devices, users should get the most relevant and timely results, no matter if the information lives on a mobile-friendly web page or app. As more people use mobile devices to access the Internet, our algorithms have to adapt to those usage patterns. In the past, we've made updates to ensure a site is configured properly and viewable on modern devices. We've made it easier for users to find mobile-friendly web pages and we've introduced App indexing to surface useful content from apps. Today, we're announcing two important changes to help users discover more mobile-friendly content:

1. More mobile-friendly websites in search results

Starting April 21, we will be expanding our use of mobile-friendliness as a ranking signal. This change will affect mobile searches in all languages worldwide and will have a significant impact in our search results. Consequently, users will find it easier to get relevant, high-quality search results that are optimized for their device.

To get help with making a mobile-friendly site, check out our guide to mobile-friendly sites. If you're a webmaster, you can get ready for this change by using the following tools to see how Googlebot views your pages:

- If you want to test a few pages, you can use the Mobile-Friendly Test.
- If you have a site, you can use your Webmaster Tools account to get a full set of mobile usability issues across your site using the Mobile Usability Report.

2. More relevant app content in search results

Example

<https://www.example.com/>

Mobile-friendly - This is an example of a website that is well-designed for mobile devices.
